FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

Digest

Agricultural exports for the first 8 months of fiscal year 1963-64 (July-February) were estimated at \$4,035 million, up 28 percent from \$3,155 million in 1962-63. The upsurge reflects gains in wheat, cotton, feed grains, soybeans, animal fats, dairy products, and rice. Although fiscal year exports of wheat and vegetable oils are not expected to be as high as estimated at the National Agricultural Outlook Conference last November, the estimate for total exports of \$6.0 billion for the year will likely be realized because of improved prospects for cotton, feed grains, rice, and animal products.

* * * * *

Agricultural exports to the European Economic Community (EEC) for the first 7 months of 1963-64 (July-January) rose to \$777 million from the year-ago level of \$613 million. Commodities subject to EEC variable import levies registered a gain of 28 percent, and other items advanced 26 percent. Among the variable-levy commodities, large advances were scored in wheat and feed grains, accompanied by smaller increases in pork (except variety meats) and ready-to-cook turkeys. The gain in wheat and feed grains reflects unfavorable grain conditions in several EEC countries last year. Over half of the gain in nonvariable-levy items was in cotton exports, which were relatively low last year due to larger foreign production and smaller foreign consumption.

* * * * *

Agricultural imports in the first 7 months of 1963-64 (July-January) amounted to \$2,416 million, 9 percent more than the \$2,213 million in 1962-63. Both supplementary and complementary products participated in the rise, a large part of which was due to higher prices. The July-January gain among supplementary commodities was mainly in meat and cane sugar. A gain of 8 percent for complementary imports included principally coffee, cocoa beans, carpet wool, and fibers. The value of coffee imports rose relatively more than volume, reflecting sharp increases in price in recent months as a consequence of the relatively unfavorable coffee crop in Brazil. Importers and roasters in recent months have imported substantially more coffee to build up their stocks. Stronger U.S. demand and a larger world crop have combined to boost U.S. imports of cocoa beans although at slightly higher prices.

* * * * *

Agricultural imports in calendar year 1963 advanced to \$4,012 million, 4 percent more than the previous year's \$3,868 million. By comparison agricultural exports advanced 11 percent to a record \$5.6 billion and exceeded imports in 1963 by \$1.6 billion. Increased imports of supplementary (partially competitive) products dominated the gain in total agricultural imports. Imports of complementary (noncompetitive) products were 1 percent lower in value. While imports of dutiable cattle fell to 834,000 head from 1,332,000 a year earlier, meat and meat products advanced to \$542 million from \$485 million. Meat imports have risen in the past 5 years, largely because of strong U.S. demand. The value of sugar imports increased to \$611 million from \$505 million, reflecting higher prices as a result of limited world supplies and increased world consumption.

* * * * *

The largest proportion of the \$1,534 million of U.S. agricultural exports under specified Government-financed programs in fiscal year 1962-63 went to Asia. Of the total of \$792 million for Asia, principal amounts went to India, Pakistan, and Republic of Korea, followed by Taiwan, Indonesia, Viet-Nam, Israel, and other countries. Europe and Africa received approximately equal amounts: \$278 million for Europe, chiefly Yugoslavia, Poland, and Turkey; and \$275 million for Africa, principally United Arab Republic (Egypt), Algeria, Tunisia, Morocco, and Republic of the Congo and Ruanda-Urundi. Lesser amounts went to Latin America and Oceania.

Principal dollar market was Europe, where the United Kingdom led the list, followed by West Germany, the Netherlands, Italy, Belgium-Luxembourg, Spain, France, and Denmark. Asia ranked second as a dollar-sales area, with the chief country market being Japan, followed by the Philippines, Hong Kong, and other countries. In Latin America, important dollar markets were Mexico and Venezuela. All shipments to Canada were for dollars.

* * * * *

Export-Import Bank loans and medium-term guarantees together with Commodity Credit Corporation (CCC) credit sales contributed to the movement of dollar exports. Exports aided by Export-Import Bank loans and medium-term guarantees amounted to \$85 million in fiscal year 1962-63 -- all for Japan and Austria. CCC credit sales were instrumental in moving \$76 million of agricultural commodities to countries such as Italy, Poland, Denmark, Spain, Japan, Brazil, Mexico, Guatemala, Haiti, Venezuela, Australia, New Zealand, and the Canary Islands.

Export Highlights

JULY 1963 - FEBRUARY 1964

U.S. agricultural exports totaled an estimated \$4,035 million in July-February of fiscal year 1963-64, up 28 percent from the \$3,155 million in the same months in 1962-63 (table 1). The figure for 1963-64 includes actual exports of \$3,509 million for July-January and an estimate of \$525 million for February. A year ago actual exports in February totaled \$492 million, reflecting in part a recovery from January 1963 when shipments were reduced by the longshoremen's strike at East Coast and Gulf Coast facilities.

The export trend in the first 8 months of fiscal year 1963-64 indicates that the estimate for total exports of \$6.0 billion made at the National Agricultural Outlook Conference last November will materialize. Declines in the estimates for wheat and vegetable oil exports have been offset by larger estimates for shipments of cotton, feed grains, rice, and animal products.

The upsurge in exports in fiscal year 1963-64 results from significant gains in wheat, cotton, feed grains, soybeans, animal fats, dairy products, and rice over 1962-63. Smaller gains occurred for fruits and vegetables, protein meal, poultry products, and meat products. Value declines were noted only for such commodities as soybean oil, flaxseed, rye, and hides and skins.

Most of the July-February increase resulted from increased dollar sales. However, shipments under Government-financed export programs have gained some. Main factors contributing to the export gain have been the relatively poor wheat harvest in Western Europe and the Soviet Bloc; a slight decline in foreign production of cotton; a change in the CCC cotton program permitting sales of CCC cotton stocks at competitive world prices; and the continued advance in economic activity in the highly industrialized areas of Western Europe and Japan.

Agricultural exports to the European Economic Community (EEC) in July-January 1963-64 (latest period for which data are available) rose to \$777 million from \$613 million for the like period a year earlier (table 2). Exports subject to the Common Market variable levies rose to \$262 million from \$205 million a year earlier, a 28 percent rise.

Most of the increase in exports of commodities subject to variable levies resulted from large advances in wheat and feed grains and smaller gains for pork (except variety meats) and ready-to-cook turkeys. Exports of other poultry products (except hatching eggs) again in 1963-64, as in 1962-63, were below the level of 1961-62, before the variable import levies were imposed.

1/ Compiled from U.S. Bureau of Census data.

2/ Classified for identification of commodities subject to the variable levies which were put into effect on July 30, 1962. The classification is designed to show the overall change in exports of these commodities rather than to measure the impact of the variable levies on exports of these commodities.

3/ Exports of wheat flour to Italy include donations under Titles II and III of P.L. 480.

4/ Estimated.

Agricultural exports to the EEC have been classified into variable-levy and nonvariable-levy commodities for identification purposes. The classification is designed to show the overall change in exports of these commodities rather than to measure the impact of the variable levies on U.S. agricultural exports.

Exports of commodities not subject to variable levies in the EEC increased 26 percent to \$516 million in July-January 1963-64 from \$409 million for the like period a year earlier. Over half of the gain was in cotton exports, which were relatively low a year ago due to larger foreign production and smaller foreign consumption.

Factors encouraging cotton exports this year include: Lower foreign production, a change in the CCC cotton program permitting sales of CCC stocks at competitive prices, and some increase in foreign consumption. In addition to the gain in cotton, exports of soybeans, tallow, tobacco, variety meats, vegetable oils, and rice to the EEC also increased. Fruits and vegetables declined slightly.

Import Highlights

JULY 1963 - JANUARY 1964

U.S. agricultural imports for consumption in the first 7 months (July-January) of fiscal year 1963-64 totaled \$2,416 million, 9 percent more than the \$2,213 million a year earlier (table 3). The increase resulted from larger imports of both supplementary (partially competitive) and complementary (noncompetitive) products. Higher prices for major agricultural imports -- both complementary and supplementary -- have accounted for a large part of the overall increase in 1963-64. Imports of nonagricultural products in July-January totaled \$7,943 million in 1963-64 compared with \$7,201 million in 1962-63.

Supplementary Imports

July-January imports of supplementary products increased to \$1,369 million this year from \$1,245 million a year earlier. The gain consisted mainly of meats and cane sugar, with smaller increases for dairy products, hides and skins, fruits, grains, nuts, and vegetables.

Complementary Imports

Complementary imports were \$1,046 million for July-January 1963-64 compared with \$968 million a year earlier, representing a gain of 8 percent. Principal gainers were coffee, cocoa beans, carpet wool, and fibers. Partly offsetting these increases were reduced imports of crude natural rubber.

CALENDAR YEAR 1963

U.S. agricultural imports for consumption in 1963 totaled \$4,012 million, up 4 percent over the previous year's \$3,868 million (table 4). The gain resulted from increased imports of supplementary (partially competitive) items. Imports of complementary (noncompetitive) products declined 1 percent, reflecting less coffee and crude natural rubber as well as lower prices for some items. By comparison agricultural exports totaling a record \$5,584 million in 1963 were 11 percent above a year earlier and exceeded imports by \$1,572 million.

Imports of nonagricultural items rose to \$13 billion in 1963 from the level of \$12.4 billion a year earlier. Such imports have been increasing for a number of years due to the continued expansion of U.S. consumer income and export promotion programs undertaken by other countries for marketing their commodities in the United States. Nonagricultural imports have been gaining about 4 percent annually in the past 5 years.

Other.....	165	175	+ 6
Total complementary.....	1,740	1,719	- 1
Total imports.....	3,868	4,012	+ 4

Imports of supplementary commodities rose to \$2,293 million in 1963 from \$2,128 million a year earlier. Gains occurred in meats, cane sugar, fruits and preparations, nuts and preparations, coconut oil, and molasses. Somewhat offsetting the increases were declines for dutiable cattle, apparel wool, copra, hides and skins, and cotton.

Imports of complementary products declined to \$1,719 million from \$1,740 million a year earlier. Declines occurred mainly in coffee and crude natural rubber, with smaller reductions for spices and tea. More bananas, hard fibers, and carpet wool were imported. Higher prices resulted in an overall value increase for cocoa bean imports although volume declined slightly in 1963.

Imports of complementary items have been moving downward since the early 1950's. A substantial part of the value decline has resulted from lower prices, reflecting surplus supplies of many items, especially coffee. In the past decade coffee prices have declined by about 35 percent mainly because of the continued expansion of production in both Latin America and Africa. The demand for most complementary commodities is highly inelastic -- that is, a small supply increase in coffee, for instance, will create a sharp drop in price, resulting in lower total value.

While the complementary imports have been declining, imports of supplementary commodities have increased in the past decade. Supplementary imports averaged 43 percent of total agricultural imports in 1950-54 and 57 percent of total imports in 1963.

Commodity detail is given in table 5.

Government Program Export Highlights

FISCAL YEAR 1962-63

P.L. 480 and AID programs accounted for \$1,534 million of the \$5,078 million of U.S. agricultural exports in fiscal year 1962-63, the year ending June 30, 1963 (table 6). Exports of agricultural commodities for foreign currencies, provided for by Title I of P.L. 480, (The Agricultural Trade Development and Assistance Act of 1954, as amended), totaled \$1,075 million, followed by lesser amounts for famine and other emergency relief shipments, foreign donations, barter, long-term supply and dollar credit sales, and sales for foreign currency and economic aid under Section 402 of P.L. 87-195 (Act for International Development).

The largest proportion, \$792 million, of Government program exports went to Asia, chiefly India, Pakistan, and Republic of Korea, followed by Taiwan, Indonesia, Viet-Nam, Israel, and other countries. Europe and Africa received approximately equal amounts. The \$278 million for Europe included Yugoslavia, the leading recipient with \$117 million, followed by Poland, Turkey, and other countries. The \$275 million for Africa included United Arab Republic-Egypt with \$125 million, followed by Algeria, Tunisia, Morocco, Republic of the Congo and Ruanda-Urundi, and other countries.

Shipments to Latin America under programs amounted to \$176 million, including \$93 million for Brazil, \$19 million for Chile, and lesser amounts for other countries.

Program shipments to Oceania -- going to the Trust Territory of the Pacific Islands and British Western Pacific Islands -- amounted to \$298,000 in 1962-63.

Shipments outside of specified Government-financed export programs -- usually referred to as commercial exports or dollar sales -- totaled \$3,544 million of the \$5,078 million exports. The largest area of dollar sales was Europe, with \$1,891 million. Principal dollar markets were the United Kingdom, West Germany, the Netherlands, Italy, Belgium-Luxembourg, Spain, France, and Denmark.

Second largest dollar-sales area was Asia, with \$736 million. Chief country markets were Japan, with \$485 million, followed by the Philippines, Hong Kong, and other countries.

Dollar exports to Latin America amounted to \$311 million, including \$68 million for Mexico, \$59 million for Venezuela, and lesser amounts for other countries. Shipments to Canada were \$517 million, all dollar sales.

Dollar exports to Africa totaled \$61 million, going principally to United Arab Republic-Egypt, Republic of South Africa, Ghana, Federation of Nigeria, and Liberia. Dollar shipments to Oceania amounted to \$41 million, principally to Australia and New Zealand.

Table 6.--U.S. agricultural exports under specified Government-financed programs, exports outside specified Government-financed programs, and total agricultural exports, value, by country of destination, year ending June 30, 1963

Table 6.--U.S. agricultural exports under specified Government-financed programs, exports outside specified Government-financed programs, and total agricultural exports, value, by country of destination, year ending June 30, 1963 - Continued

- 1/ Foreign donations are authorized under Sec. 416 of the Agricultural Act of 1949 and Sec. 302, Title III, P.L. 480.
- 2/ The barter program is authorized under the Charter Act of the Commodity Credit Corporation; Sec. 303, Title III, P.L. 480; and other legislation.
- 3/ AID programs.
- 4/ "Total Agricultural exports outside specified Government-financed programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) extension of credit for relatively short periods, (2) sales of Government-owned commodities at less than domestic market prices, and (3) export payments in cash or in kind.
- 5/ Less than \$500.
- 6/ Net adjustment from a previous period.
- 7/ Under agreements with Burma and Indonesia, raw cotton was exported to third countries for processing. In exchange, processed goods are exported to the agreement country. The Title I values shown for the above-mentioned countries do not include the value of the raw cotton exported to third countries as follows:

<u>Agreement Country</u>	<u>Value (Thousand dollars)</u>
Burma	8
Indonesia	18,473
Total	<u>18,481</u>

The cotton not included in the values for the agreement countries is included in the Title I value for the processing countries as follows:

<u>Processing Country</u>	<u>Agreement Country</u>	<u>Value (Thousand dollars)</u>
Japan	Burma	8
Hong Kong	Indonesia	2,710
Japan	Indonesia	14,827
Yugoslavia	Indonesia	936
Total cotton processed in third countries		<u>18,481</u>

- 8/ The non-comparability of the data available for the reporting of Government-financed programs may affect the reliability of the totals for any country, but the discrepancies are most apparent when exports under Government programs exceed total exports. These excesses may be attributed to lags in reporting or to differences in valuation procedures. Exports under Title II are shown in this report at cost to CCC, whereas these shipments are at times reported to the Bureau of the Census at market value.
- 9/ The Title II value shown for India includes commodities exported to India to replace stocks advanced for emergency relief for people of Nepal.
- 10/ Donations through the United Nations Relief and Works Agency (UNRWA) for the relief of Palestine refugees.

Dollar sales included, in addition to regular transactions, Export-Import Bank loans and medium-term guarantees along with Commodity Credit Corporation (CCC) credit sales. Such credit sales in fiscal year 1962-63 amounted to \$85 million and \$76 million, respectively, for these 2 programs, and they aggregated \$161 million (table 7). Export-Import Bank loans were used principally to finance shipments of agricultural commodities to Japan. CCC credit sales were instrumental in moving \$30 million of agricultural commodities to Europe including Italy, Poland, Denmark, Spain, and other countries. Credit shipments to Asia totaled \$24 million, primarily to Japan. Such shipments to Latin American countries totaled \$17 million, including Brazil, Mexico, Guatemala, Haiti, and Venezuela. Such shipments to Oceania amounted to \$4 million and went entirely to Australia and New Zealand, while those to Africa were \$1 million, all to the Canary Islands.

1/ Credits for relatively short periods repayable in dollars plus interest (covering the financing costs of the lending agency).

2/ Includes disbursements during the period under Export-Import Bank loans (in which U.S. commercial banks participated at their own or at Export-Import bank risk) and guarantees against political and/or financial risk.

3/ Purchases during the period.

4/ Included in the above amount is \$21.3 million for cotton under a credit of \$125 million for agricultural and other commodities to Japan. The total disbursed for agricultural commodities except cotton is not available.

1/ Preliminary.

2/ Less than 500.

3/ Reported in value only.

4/ Excludes the weight of "other hides and skins," reported in pieces only.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 87-195 (Act for International Development), principally sales for foreign currency; under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at time of shipments from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$100-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$100-\$1,999 are sampled.

IMPORTS Imports for consumption consist of commodities released from U.S. Customs custody upon arrival, or entered into bonded manufacturing warehouse, or withdrawn from bonded storage warehouse for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
